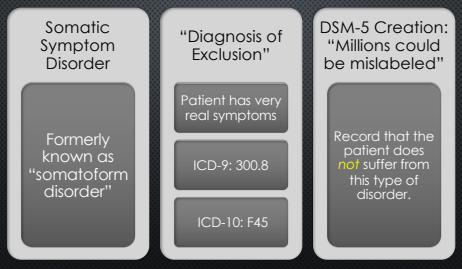
UNIVERSAL BOGUS DEFENSES



DEFENSE MYTH #1

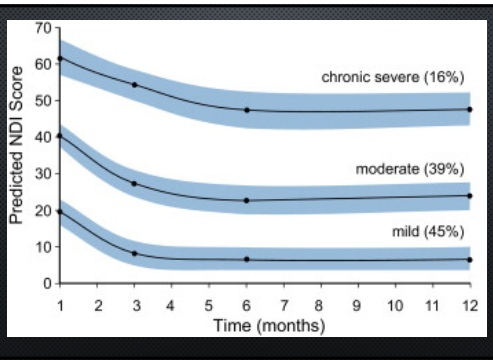
MYTH: THE FORCE OF THE IMPACT IS THE SAME AS SITTING IN A CHAIR, WAKING OFF A CURB OR A SNEEZE. (MURRAY ALLEN, MD ET AL – ACCELERATION PERTURBATIONS OF ACTIVITIES OF DAILY LIVING

TRUTH: SITTING IN A CHAIR DOES NOT TAKE INTO ACCOUNT THE EXCHANGE OF ENERGY FROM THE BULLET VEHICLE TO THE TARGET VEHICLE.

DEFENSE MYTH #2

MYTH: ALL SOFT TISSUE INJURIES RESOLVE IN 6-12 WEEKS.

TRUTH: THERE IS NO CREDIBLE STUDY TO SUPPORT THIS ASSERTION.



DEFENSE MYTH #3

MYTH: THE ACCIDENT RECONSTRUCTIONIST SAID THAT THERE IT IS IMPOSSIBLE TO BE INJURED IN A LOW SPEED CRASH.

TRUTH: ONLY THE TREATING DOCTOR CAN STATE WHETHER A PATIENT HAS BEEN HURT TO A REASONABLE DEGREE OF CERTAINTY.

DEFENSE MYTH #4

MYTH: AN ACCELERATION CHANGE OF 5 MPH IS NOT ENOUGH TO CAUSE INJURY.

TRUTH: A DELTA V OF 5 MPH IS MORE THAN ENOUGH TO CAUSE PERMANENT INJURY.

ONE CAN NOT RETROSPECTIVELY REVIEW AN INJURY.

DEFENSE MYTH #5

MYTH: 50% OF THE POPULATION OVER THE AGE OF 40 HAVE A HERNIATED DISC.

TRUTH: EVEN IF THIS WERE TRUE, HALF OF THE POPULATION OVER 40 DOES NOT WALK AROUND WITH CHRONIC BACK PAIN AND RADICULAR COMPLAINTS EVERY DAY.

DEFENSE MYTH #6

MYTH: THE INJURIES WERE PRE-EXISTING.

TRUTH: THE MAJORITY OF PEOPLE WHO HAVE DEGENERATION AND DISC BULGES DO NOT HAVE SYMPTOMS OF DECREASE IN STRENGTH AND SENSATION.

FACT: TRIAL ATTORNEY'S LOVE PATIENTS WITH DEGENERATION WHO WERE INJURED IN LOW SPEED CRASHES.

DEFENSE MYTH #7

MYTH: POSITIVE WADDELL'S SIGNS INDICATE MALINGERING.

TRUTH: WADDELL'S SIGNS ARE USED TO DETERMINE WHETHER A DISC HERNIATION IS CENTRALIZED OR LATERAL. THESE SIGNS ARE USED AS A PREDICTOR TO DETERMINE WHETHER SURGERY WILL HELP AN INDIVIDUAL OR NOT.

DEFENSE MYTH #8

MYTH: IT WAS AN ACCIDENT.

TRUTH: THE DEFENDANT WAS NEGLIGENT AND CAUSED AN INCIDENT CALLED A COLLISION. THE INCIDENT WAS COMPLETELY AVOIDABLE AND THEREFORE NOT AN ACCIDENT.

DEFENSE MYTH #9

MYTH: THERE WAS NO DAMAGE DONE TO THE VEHICLE SO THE OCCUPANT(S) COULD NOT HAVE BEEN INJURED.

TRUTH: THERE IS NO DIRECT CORRELATION BETWEEN THE DAMAGE OF THE VEHICLE AND THE INJURIES SUSTAINED BY THE OCCUPANT(S). SEE THE SAE STUDY.

DEFENSE MYTH #10

MYTH: PLAINTIFF'S AND DOCTORS AND LAWYERS ARE JUST TRYING TO RIP OFF THE SYSTEM.

TRUTH: 4 OUT 5 PROPERTY DAMAGE CASES DO NOT INVOLVE ANY BODILY INJURY. PEOPLE PAY INSURANCE TO INDEMNIFY THEM IN THE EVENT OF AN ACCIDENT. MORE THAN 9 OUT OF 10 CASES DO NOT INVOLVE ANY FRAUD.

DEFENSE MYTH #11

MYTH: THE PLAINTIFF WAITED FOR __ WEEKS TO GO TO THE DOCTOR.

TRUTH: HONEST PEOPLE THINK THAT SYMPTOMS ARE GOING TO GO AWAY AND WHEN THEY DO NOT THEY SEEK OUT MEDICAL CARE.

DEFENSE MYTH #12

MYTH: THE LITHUANIAN STUDY SHOWED THAT THE SAME NUMBER OF PEOPLE WHO HAD NECK PAIN AND HEADACHES WAS THE SAME FOR PEOPLE WHO DID AND -- DID NOT -- HAVE A CAR ACCIDENT.

TRUTH: ARTHUR CROFT, DC AND MICHAEL FREEMEN, DC, PH.D. SAID THE STUDY WAS "FATALLY FLAWED".

Issues For Claims Redesign
Overall Objective: Redesign activities and core processes to significantly improve Allstate's competitive economics over the intermediate and longer time period
Claims Objective: Improve execution and optimize balance of severities and expenses to minimize total
How can Allstate reduce overpayment by better standardizing best practices in all phases of file execution across the 10,000 claim representatives?
Can Allstate improve its litigation management across the many different local markets and thousands of front-line decisions made daily (e.g., to limit retention of attorneys/filing of suit, build claim department litigation management skills and decision support, effectively deploy staff counsel and manage outside counsel)?
Do claims reps possess adequate technical expertise for effective medical management…to ensure treatment appropriateness and exercise medical cost containment?
What opportunities exist to reduce expenses by automation/technology…?
Are there economically justified opportunities for investment in expenses to drive greater reduction in severities?
McKinsey slide 10

CCPR Quiz

Question 12: We currently take over 10% of cases to verdict.

Answer: False

Comments:

- Because we are good at litigation, it may be easy to assume that we do it a lot; we don't
- Only about 4% of our represented files go to verdict
- Because **verdicts appear to lead to better results than negotiating with plaintiff attorneys, we should consider enhancing our litigation strategies**

McKinsey slide 3010

PROVIDER COMPLIANCE SOLUTIONS, INC.

In addition, Allstate does not *aggressively use litigation to maintain fair settlement values* in the market

Pie chart showing 75% of cases are represented with side bar graph showing 55% with no case filed, 41% filed a case, only 4% of 517 represented cases went to verdict]

Plaintiff Attorney quotes:

"State Farm is *terrible to deal with*; they are not afraid to go to trial."

"State Farm has driven values down in this market by going to court and winning some cases."

"State Farm has a *clear strategy to drive down market values through going to trial...* I don't like it and it will hurt them in the long run."

05/12/02

Subjective: Today, the patient indicated that his pain in the right region of the neck which is increased by rotating the head left has not noticeably changed since his last visit. The patient also indicated his pain across the right shoulder remains unchanged since his prior visit. Additionally, Mr. . stated his dull headaches located in the temples is feeling about the same as his last visit. Furthermore, the patient reported his pain in the bilateral mid back has not noticeably changed since his previous visit.

Objective: The cervical region was found to have a mild-moderate level of discomfort when evaluated by palpation. The thoracic region was revealed to have a mild-moderate level of tenderness when evaluated by palpation. Examination of muscle tenderness and spasm revealed the following: Levator scapulae revealed moderate tenderness. Posterior cervical revealed mild-moderate tenderness. A trigger point was found with active pain in the posterior cervical muscle area with radiation to the upper back region. Evaluation of the levator scapulae muscle area revealed a trigger point with active pain with radiation to the head region. A posterior subluxation was found at the thoracic region.

Assessment: Today, the patient seems to be accepting the treatment well, but has shown little progress since the prior visit.

Plan: The cervical spinal levels through the thoracic spinal levels showed minimal segmental motion during today's technique. Therapy on the cervical,thoracic,lumbar and upper extremity regions will continue as planned with kinetic therapy to restore normal spinal biomechanics. To increase the effectiveness of Mr. treatment, he will continue to perform specific stretches and use alternate heat and cold. Mr. is a prolific smoker and this is impeding his ability to heal.

Acceleration perturbations of daily living. A comparison to 'whiplash'.

Allen ME[1], Weir-Jones I, Motluk DR, Flewin KR, Goring RD, Kobeitich R, Broadhurst A.

Author information

Abstract

STUDY DESIGN: This study measured repeated human head accelerations (g) during daily activities.

OBJECTIVES: Perturbations of daily living were compared to similar data from low velocity rear-end motor vehicle accidents.

SUMMARY OF BACKGROUND DATA: Past assumptions suggest that motor vehicle accident severity does not correlate with the degree of sustained injury. Early engineering studies indicated that occupant disturbance in a low velocity motor vehicle accident is minor.

METHODS: Eight volunteers were perturbed with 13 daily activities. Helmets on the heads of volunteers were instrumented with tri-planar accelerometers with output sampling of 500 Hz, sensitivity of 0.02 g, and a range of +/- 20 g.

RESULTS: There was wide inter-subject response for various perturbations. Plopping backward into a chair caused maximum peak acceleration horizontally at 5.6 g and vertically at 8.5 g, with force vector of 10.1 g at 54.9 degrees. Mean impulse duration was 0.19 sec. There was no hint of injury in any subject.

CONCLUSIONS: Perturbations of daily living compared similarly to the jostling expected in low velocity "whiplash"-type motor vehicle accidents.

36 – 40 (58.0 - 64.4)	0
41 - 45 (66.0 - 72.5)	1

Table 7: Crush depth estimates from two photographs.

Evaluating the Uncertainty in Various Measurement Tasks Common to Accident Reconstruction

2002-01-0546

MEASURING VEHICLE CRUSH

The amount of deformation a vehicle sustains is often of interest to a reconstructionist conducting an energy-based accident analysis. While the vehicle itself is sometimes available for measurement, reconstruction-ists are occasionally asked to determine deformation depths from one or more photographs. Experiments examining the variation involved in each of these methods of crush measurement and estimation are described below.

Most of the participants in this exercise reported that they would not attempt to use information generated in this fashion in a reconstruction without additional details and analysis.

NEWTON'S FIRST LAW OF MOTION

I. EVERY OBJECT AT REST TENDS TO REMAIN AT REST AND EVERY OBJECT IN A STATE OF MOTION TENDS TO REMAIN IN THAT STATE OF MOTION UNLESS AN EXTERNAL FORCE IS APPLIED TO IT.

GALILEO'S *LAW OF INERTIA*

WE TREAT "INERTIAL INJURIES"

NEWTON'S SECOND LAW OF MOTION

II. THE RELATIONSHIP BETWEEN AN OBJECTS MASS (*M*), IT'S ACCELERATION (*A*) AND THE APPLIED FORCE (F) CAN BE STATED AS $F = MA$ $(N = KG \times M/S^2)$

ARISTOTLE STATED $F = MV$, MEANING THERE IS ONLY VELOCITY IF THERE IS FORCE. *THIS IS CONVENTIONAL WISDOM, HOWEVER, IT IS WRONG.*

ESTIMATE *F* OF COLLISION IN YOUR FINAL REPORT

NEWTON'S THIRD LAW OF MOTION

III. FOR EVERY ACTION, THERE IS AN EQUAL AND OPPOSITE REACTION.

WHEN TWO VEHICLES COLLIDE, ALL VEHICLES ABSORB THE IMPACT OF THE COLLISION. THEREFORE, YOU NEED TO GET PICTURES OF THE OTHER VEHICLE(S) INVOLVED IN THE COLLISION. THIS IS NOT PROPORTIONAL.

CONSERVATION OF ENERGY

ENERGY CAN BE NEITHER CREATED NOR DESTROYED; RATHER, IT TRANSFORMS FROM ONE FORM TO ANOTHER.

THEREFORE, WHEN A COLLISION OCCURS, THERE IS A TRANSFER OF FORCE BETWEEN TWO VEHICLES EVEN WHEN THERE IS NO PROPERTY DAMAGE.

"CRUSHING CAN BE GOOD"

CONSERVATION OF ENERGY

TRIAL GUIDES

Trial Guides Author Contribution

Increasing Claim Value in Auto Cases

Aaron DeShaw

Auto insurers use a variety of software programs to limit claim value. In addition to medical bill review software and vehicle damage software programs, most insurers use software to evaluate bodily injury claim value. The predominant software used by insurers is the Colossus program, which determines values for up to 60 percent of all auto claims in the United States. An additional 10 percent are analyzed by competing programs such as Claims Outcome Advisor, ClaimIQ, and Exposure Manager.

DETERMINING VALUES

Colossus determines values based on approximately 720 Diagnoses and 12,500 "Codes" or "factors." These diagnoses and factors determine the value of the settlement offer. It is important that, in order to obtain the highest offer on a case, evidence of all of your client's injuries are in the medical records and that you make the appropriate claims in your demand letter.

THE TOP FIVE FACTORS

Injuries

In Colossus, diagnoses are referred to as "injuries." Injuries in Colossus are the largest value driver in the system.

It is critical to your client's evaluation that their doctor diagnoses every condition present in the client soon. Failure to diagnose all conditions will result in an undervaluation of the case. Colossus is a system set up to open additional screens of factors when triggered by the adjuster's answer. If certain diagnoses are not entered, it will prevent the adjuster from reaching screens containing factors that provide additional value. The value of each "severity point" attached to the factors increases in value as more severity points are added in a case.

AMA Permanent Impairment Ratings

"Permanent impairment" is the second largest driver of value in these systems, only behind diagnoses.

Colossus only recognizes *The American Medical Association Guides to the Evaluation of Permanent Impairment*, 5th Edition (the AMA Guides), which is reproduced in its entirety in the Colossus system, and uses only ratings to the person as a whole. These are referred to as "Whole Person Impairment Ratings." There are certain injuries that, in and of themselves, carry a permanency rating. For example, a compression fracture of the lumbar spine under some circumstances may not require aggressive or long-term treatment. However, this injury automatically carries a permanency rating under the AMA guidelines. Under a Colossus evaluation, the permanency rating greatly increases the value of the claim.

If you handle personal injury cases, you should familiarize yourself with the basic structure of the AMA Guides, and find a knowledgeable medical specialist to whom you can refer clients to for these evaluations.

- ☐ I don't enjoy work as much as before
- ☐ I keep off at work
- ☐ I take unpaid time off work to go to Dr.
- ☐ I daydream at work more than before
- ☐ I feel tired at work
- ☐ _____
- ☐ _____
- ☐ I work in pain because I have bills to pay
- ☐ I can't take time off because I would lose my job
- ☐ I keep working as I don't love my at company
- ☐ My business would fail if I took time off
- ☐ I believe in working even when I'm in pain
- ☐ I feel obligated to work even though I'm in pain
- ☐ I have been reprimanded since the accident
- ☐ My work is not as good as it was before accident
- ☐ My boss reprimanded me for poor performance
- ☐ I got a different job within the same company
- ☐ I got a different job in another company
- ☐ I was demoted since the accident
- ☐ I cannot do the same work job as before accident
- ☐ I can't concentrate as well at work
- ☐ I take paid time off to go to Dr.
- ☐ I make mistakes at work I didn't used to
- ☐ I think my poor work performance from my boss
- ☐ _____
- ☐ _____

- ☐ My house is not as clean now
- ☐ My yard is not as neat now
- ☐ I cannot do my normal indoor work
- ☐ I do yard work, but do it in pain
- ☐ I cannot do my normal yard work
- ☐ I do house work, but do it in pain
- ☐ I cannot do my normal house work
- ☐ I cannot do laundry
- ☐ I cannot do laundry now
- ☐ Washing dishes hurts me
- ☐ I cannot wash dishes now
- ☐ Vacuuming hurts me
- ☐ I cannot vacuum now
- ☐ Cooking hurts me
- ☐ I cannot cook now
- ☐ Washing the car hurts me
- ☐ I cannot wash my car
- ☐ _____
- ☐ _____
- ☐ I cannot take time off because I care for children
- ☐ I have _____ children ages _____
- ☐ I cannot afford a housekeeper
- ☐ I asked someone for unpaid housekeeping help
- ☐ I had to hire a paid gardener
- ☐ I asked someone for unpaid yard work help
- ☐ Mowing the lawn hurts me
- ☐ I cannot mow the lawn
- ☐ Taking out the trash hurts me
- ☐ I cannot take out the trash
- ☐ I do not enjoy my gardening/yardwork like I used to
- ☐ Gardening hurts me
- ☐ I cannot do my gardening at all since the accident
- ☐ I cannot do my gardening as much as I did before
- ☐ Others living with me do my share of the yard work
- ☐ Others living with me do my share of the gardening
- ☐ _____
- ☐ _____

HISTORY & EXAM

- PROPERTY DAMAGE – INDEPENDENT ESTIMATE, OEM PARTS
- AWARE OF THE ACCIDENT – #1 PREDICTOR OF LONG TERM PAIN
- POSITION IN VEHICLE, SEAT BELT, FOOT ON BRAKE, ETC.
- PRIOR TREATMENT – ER, HOSPITAL, MEDICATION, TENS, DME
- DOCUMENT ALL INJURIES – LOOK FOR TBI
- PAST TREATMENT IN YOUR OFFICE – WITHIN 3 YEARS?
- BILL THE ACCURATE E/M CODE – RARELY CAN BILL A 99204/99214

HISTORY & EXAM

- Range of Motion loss (this one is huge)
- Headaches (need duration and frequency)
- Dizziness (usually experienced right after accident; also big, linked to visual disturbance; can be recognized as form of Tinnitus)
- Anxiety (linked to depression and sleep disturbance)
- Radiating Pain – Must be validated

DIAGNOSIS

- #2 "value driver" in Colossus
- Use ICD-10 – Got to ICD10data.com
- Diagnose to the highest specificity – Revise if necessary
- Estimated that 40% of patients have ligamentous laxity
- Take AP and lateral first – Then flexion/extension
- Impairment potential – Dramatically increase the value
- Diagnostic Testing – MRI/CT, X-ray, sEMG, DMX, Digitizing

OUTCOME ASSESSMENTS

- Used to help determine treatment effectiveness
- Colossus outcome assessments – DUD, LOE
- Condition specific questionnaires – Oswestry, NDI, HDI
- Pain scales – McGill pain questionnaire
- Range of motion – Inclinometer and goniometers
- sEMG – DynaROM by MyoVision, p. 45 AMA Guides to ROM
- Computerized digitization

DUTIES UNDER DURESS AND LOSS OF ENJOYMENT OF LIFE

- Colossus questionnaires
- Significant "Value Drivers"
  - DUD: Over 100 questions. Each have a value
- Perform at a minimum every 30 days
- Give at beginning, during and end of treatment

SOAP NOTES & PROGNOSIS

- SOAP notes – Chief data source
  - Legible and complete; gaps in care
- Prognosis – Perform every 2 to 4 weeks
- Use regular terms as well as Colossus terminology
- Uncertain – let them know why
- Proposed treatment
- Expected outcome – Be detailed. Dictation is best

S: The patient presented today with continuing complaints of neck pain which she rated as 3/10. She stated that treatment in out office has improved her condition. She can sleep longer at night and is able to do more daily activities without as much pain. She still can not play tennis.

O: Fixations were noted at C2, C4 and C7. There was tenderness noted in the cervical at C5 on the left. Muscle spasms were noted in the cervical spine bilaterally. Range of motion was limited in the cervical spine on L lateral flexion and L and R rotation.

A: The patient is continuing to improve but still has some functional limitations and pain.

P: The patient received a diversified manipulation to the cervical. The patient tolerated the treatment well. This service was performed by the undersigned provider. This was billed as 98940.

She also received ice massage to the cervical spine for 30 minutes. The calculated time included the intra-service only. This was provided by a licensed massage therapist under the supervision of the undersigned licensee. The purpose of the massage was to decrease swelling and reduce muscle spasm rather than increase the extensibility of the muscle fibers, therefore, it was billed as 97124 rather than 97140.

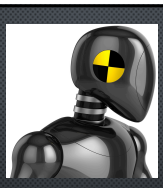
- Muscle testing
- Duties under duress
- Loss of enjoyment of life
- Pain questionnaire
- Condition specific questionnaire



LESSON 5
MANIPULATION AND THERAPEUTIC PROCEDURES

Chiropractic Manipulative Treatment

Chiropractic manipulative treatment (CMT) is a form of manual treatment to influence joint and neurophysiological function. This treatment may be accomplished using a variety of techniques.

The chiropractic manipulative treatment codes include a pre-manipulation patient assessment. Additional Evaluation and Management services may be reported separately using modifier 25, if the patient's condition requires a significant separately identifiable E/M service, above and beyond the usual preservice and postservice work associated with the procedure. The E/M service may be caused or prompted by the same symptoms or

98940	Chiropractic manipulative treatment (CMT); spinal, 1-2 regions *CPT Assistant* Jan 97:7, 11, Feb 99:10, Dec 00:15, Mar 06:15, Dec 07:16, 17, Oct 09:10
98941	spinal, 3-4 regions *CPT Assistant* Jan 97:7, 11, Mar 97:10, Feb 99:10, Dec 00:15, Mar 06:15, Dec 07:16, 17, Oct 09:10

98943	extraspinal, 1 or more regions *CPT Assistant* Jan 97:7, 11, Mar 97:10, Feb 99:10, Dec 00:15, Mar 06:15, Dec 07:16, 17, Oct 09:10

In the January 1997 edition of the CPT Assistant on page 11 the following is included:

"Who can report the Osteopathic Manipulative Treatment codes (98925-98929) and the Chiropractic Manipulative Treatment codes (98940-98943)? Are the OMT codes restricted for use by osteopathic physicians and the CMT codes restricted for use by chiropractic physicians?

AMA Comment

It is important to recognize that the listing of a service or procedure and its code number in a specific section of the CPT code book does not restrict its use to a specific specialty group. Any procedure or service in any section of the CPT coding manual may be used to designate the services rendered by any qualified physician. Therefore, the osteopathic manipulative treatment codes and the chiropractic manipulative treatment codes can be reported by any physician who is qualified to perform these types of manipulation. No distinction is made concerning the physician's licensure or professional credential. Licensure and credentialing vary on a state-by-state and institutional basis."

Osteopathic Manipulative Treatment

Osteopathic manipulative treatment (OMT) is a form of manual treatment applied by a physician to eliminate or alleviate somatic dysfunction and related disorders. This treatment may be accomplished by a variety of techniques.

thoracic region; lumbar region; sacral region; pelvic region; lower extremities; upper extremities; rib cage region; abdomen and viscera region.

CPT Assistant Nov 98:37-38

98925	Osteopathic manipulative treatment (OMT); 1-2 body regions involved *CPT Assistant* May 96:10, Jan 97:8, 10, Jul 98:10, Aug 00:11, Dec 00:15, Oct 09:10
98926	3-4 body regions involved *CPT Assistant* May 96:10, Jan 97:8, Aug 00:11, Dec 00:15, Oct 09:10
98927	5-6 body regions involved *CPT Assistant* May 96:10, Jan 97:8, Aug 00:11, Dec 00:15, Oct 09:10

LESSON 5
MANIPULATION AND THERAPEUTIC PROCEDURES

CPT INTRODUCTION

- PROVIDERS ARE TO BILL THE SERVICE OR PROCEDURE THAT ~~MOST~~ ACCURATELY DESCRIBES THE LEVEL OF SERVICE PROVIDED.
- DO NOT APPROXIMATE
- USE UNLISTED CODE IN EACH SECTION
  - 97039 UNLISTED MODALITY

CPT USAGE IN PERSONAL INJURY

- USE THE CODES AS THEY ARE DEFINED IN THE CPT CODE BOOK.
- IF YOU ARE AN IN-NETWORK PROVIDER FOR ANY INSURANCE PLAN YOU MAY END UP TAKING A REDUCTION IN YOUR PIP AND MED-PAY BILLS.
- IF PATIENT USES COMMERCIAL INSURANCE OR MEDICARE YOU CAN NOT BALANCE BILL

"ONE ON ONE" DEFINITION

- THE PROVIDER MUST MAINTAIN:
  - VERBAL
  - VISUAL, AND OR
  - ACTUAL CONTACT
- WITH THE PATIENT THROUGHOUT THE PROCEDURE

THERAPEUTIC MODALITIES

SUPERVISED MODALITIES

- NO ONE-ON-ONE
- MUST BE ONSITE
- MAY BE DELEGATED
  - ICE/HEAT
  - UNATTENDED EMS
- CODES ARE NOT TIMED
- CAN ONLY BILL 1 UNIT

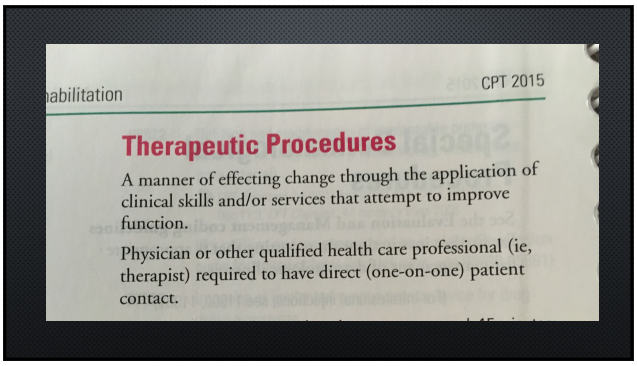
CONSTANT ATTENDANCE

- ONE-ON-ONE
- MUST BE ONSITE
- MAY BE DELEGATED
  - ULTRASOUND
  - ATTENDED EMS
- THESE CODES ARE TIMED
- ONE UNIT 8 PLUS MIN

Therapeutic Procedures

A manner of effecting change through the application of clinical skills and/or services that attempt to improve function.

Physician or therapist required to have direct (one-on-one) patient contact.



Identification of Users for the Physical Medicine and Rehabilitation Codes

As with other sections of CPT, the codes in the physical medicine section are designed to identify physical medicine services. These codes are not restricted to use by a specific specialty group. Instead, these codes may be used by any provider who is qualified to perform the service represented by the specific code. No distinction is made concerning the licensure or professional credentials of the provider. Licensure and credentialing vary on a state-by-state and institutional basis. Appropriate state and institutional authorities should be consulted regarding the appropriate provision of these services by health care professionals.

CALCULATING THE TIME OF THERAPEUTIC PROCEDURES

AS OF MARCH 2014, YOU CAN NO LONGER USE THE 52 MODIFIER WHEN BILLING FOR TIMED THERAPY SERVICES.

EXAMPLE: 20 MINUTES OF A THERAPEUTIC EXERCISE IS BILLED AS 97110 RATHER THAN 97110 – 52

TIMING THERAPEUTIC PROCEDURES

- MUST PERFORM 8 MINUTES OF EACH UNIT TO QUALIFY FOR THE UNIT OF THERAPY BILLED
  - I.E. ONE UNIT IS NOW 8 TO 22 MINUTES OF TOTAL TIME
- TIME INCLUDES THE PRE, INTRA AND POST SERVICE
- COMBINE TOTAL TIME WHEN BILLING >1 TIMED THERAPY
  - EX: 5 MIN OF ULTRASOUND AND 20 MIN OF THER EX = 2 UNITS

MUST PASS MID-POINT

1 UNIT - 8 TO 22 MINUTES
2 UNITS - 23 TO 37 MINUTES
3 UNITS - 38 TO 52 MINUTES
4 UNITS - 53 TO 60 MINUTES
INCLUDES PRE-, INTRA- AND POST- SERVICE

ATTENDED ELECTRIC STIM

- CPT CODE - 97032
  - CHANGE THE SETTINGS OF THE MACHINE AT PERIODIC INTERVALS.
- 97014 – ATTENDED E-STIM IS A FIXED POSITION FOR A FIXED AMOUNT OF TIME.

THERAPEUTIC EXERCISES

- CPT CODE 97110
- INCREASE STRENGTH, ENDURANCE AND/OR FLEXIBILITY
  - MUST HAVE MEASURABLE LOSS OF FUNCTION
  - CAN NOT COMPLETE WITHOUT ASSISTANCE
- MUST LIST A REASON WHY DONE IN OFFICE
  - COMORBIDITY
  - DO NOT STATE THE PATIENT DOESN'T HAVE REQUIRED EQUIPMENT

NEUROMUSCULAR RE-EDUCATION

- CPT CODE - 97112
- THERAPEUTIC EXERCISE TO REGAIN SOME FUNCTION OF A MUSCLE THAT HAS BEEN LOST
  - MUST HAVE SIGNIFICANT LOSS OF FUNCTION
- NOT JUST FOR STROKE VICTIMS

THERAPEUTIC ACTIVITIES

- CPT CODE - 97530
- THERAPEUTIC EXERCISES USING DYNAMIC ACTIVITIES TO INCREASE FUNCTION
- MULTIPLE PARAMETERS
  - BALANCE, STRENGTH, COORDINATION
  - WALKING, RUNNING, JUMPING, THROWING

MASSAGE THERAPY

- CPT CODE - 97124
- MASSAGE THAT ATTEMPTS TO INCREASE CIRCULATION AND PROMOTE TISSUE RELAXATION.
- THIS CODE CAN BE BILLED WITH CMT/OMT
- USE ICE MASSAGE IN ACUTE PHASE OF CARE

MANUAL THERAPY

- CPT CODE 97140
- MASSAGE THAT IS INTENDED TO INCREASE THE EXTENSIBILITY OF THE MUSCLE FIBERS OR BREAK UP ADHESIONS
- CAN NOT BILL IN THE SAME REGION OF A CMT
- MUST USE THE 59 MODIFIER WHEN DONE IN DIFFERENT REGION OF THE BODY THAN A CMT

98940	CERVICAL MANIPULATION
97140 52	LUMBAR MANUAL THERAPY

GROUP THERAPY

- CPT CODE 97150
- TWO OR MORE PEOPLE BEING SUPERVISED AT THE SAME TIME WITH SAME PROVIDER.
- DOES NOT REQUIRE DIRECT ONE-ON-ONE CONTACT

CODING MODIFIERS

25 - APPENDED TO E/M SERVICE WHEN CMT/OMT IS PERFORMED ON SAME VISIT.

59 - APPENDED TO 97140 WHEN MANUAL THERAPY IS PERFORMED TO A DIFFERENT REGION OF THE BODY THAT A MANIPULATION.

52 - CAN NO LONGER USE FOR TIMED THERAPY.

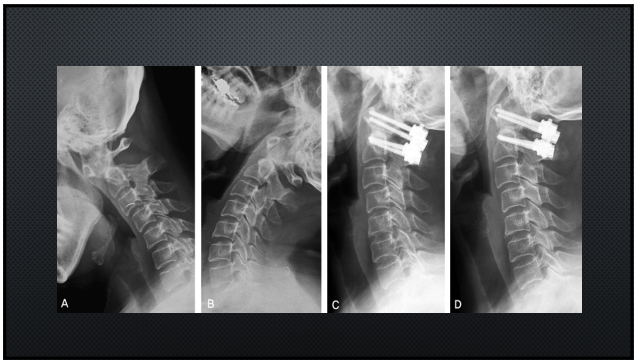
Axis (C2)
Upper Cervical Spine: Posterior to Anterior View with Ligaments



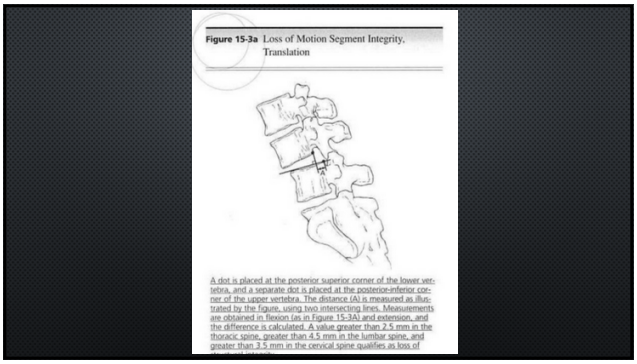


Figure 15-3a Loss of Motion Segment Integrity, Translation

A dot is placed at the posterior superior corner of the lower vertebra, and a separate dot is placed at the posterior-inferior corner of the upper vertebra. The distance (A) is measured as illustrated by the figure, using two intersecting lines. Measurements are obtained in flexion (as in Figure 15-3A) and extension, and the difference is calculated. A value greater than 2.5 mm in the thoracic spine, greater than 4.5 mm in the lumbar spine, and greater than 3.5 mm in the cervical spine qualifies as loss of

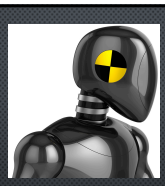
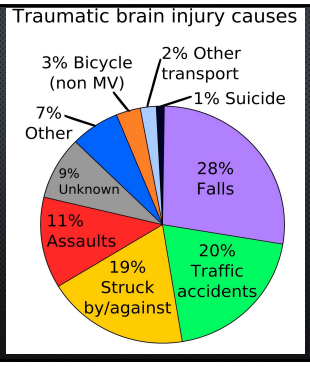
Abnormal / Ratable Segment Normal Segment

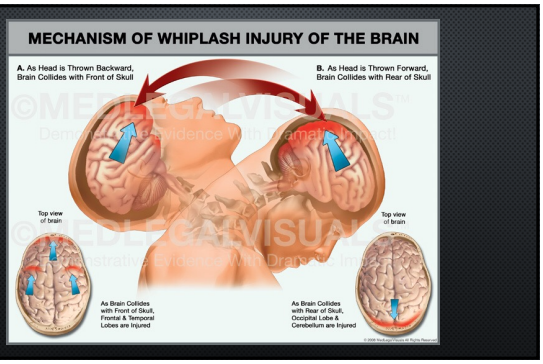
LIGAMENTOUS LAXITY

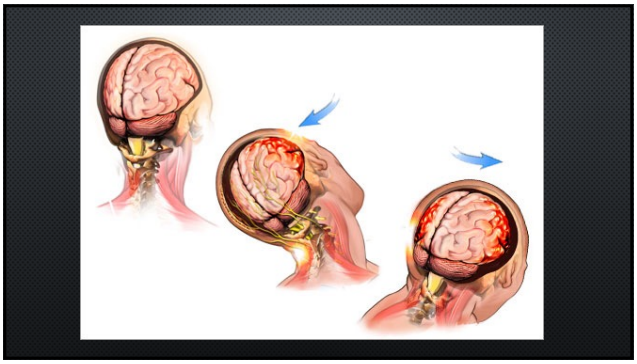
- LMSI IS HUGE IMPAIRMENT RATING FOR CERVICAL AND LUMBAR SPINE
- 25% IN CERVICAL
- 20% IN LUMBAR
- THIS IS WHY FLEX/EXT. X-RAYS ARE ALWAYS NECESSARY FOR EVERY WHIPLASH INJURY!
- EVERY PI CLAIM SHOULD ASSUME POSSIBLE LMSI AS A MATTER OF PRACTICE!



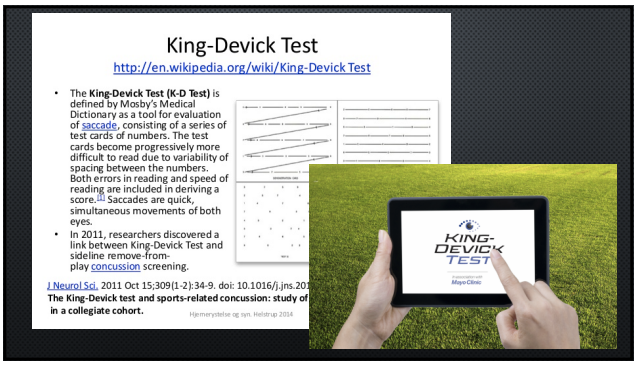
LESSON 6
DIAGNOSING LIGAMENT LAXITY AND TRAUMATIC BRAIN INJURY







Confused, dazed, or disoriented state
Losing consciousness for a few seconds or minutes
Headache
Loss of balance or dizziness
Drowsiness or fatigue
Nausea or vomiting
Trouble sleeping
Sleeping more than usual
Light or sound sensitivity
Ringing in the ears
Blurred vision
Bad taste in the mouth
Changes in sense of smell
Mood swings or changes



King-Devick Test
http://en.wikipedia.org/wiki/King-Devick Test
The King-Devick Test (K-D Test) is defined by Mosby's Medical Dictionary as a tool for evaluation of saccade, consisting of a series of test cards of numbers. The test cards become progressively more difficult to read due to variability of spacing between the numbers. Both errors in reading and speed of reading are included in deriving a score.[1] Saccades are quick, simultaneous movements of both eyes.
In 2011, researchers discovered a link between King-Devick Test and sideline remove-from-play concussion screening.
J Neurol Sci. 2011 Oct 15;309(1-2):34-9. doi: 10.1016/j.jns.201

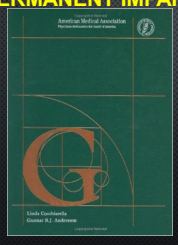
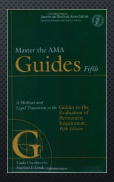
LESSON 7
IMPAIRMENT RATING TERMINOLOGY

VII. IMPAIRMENT RATING

- PERFORM WHEN PATIENT REACHES MMI
- USE THE 5TH EDITION OF THE AMA GUIDES – REGARDLESS OF WC
- SPINE – DRE AND ROM MODEL
  - DRE: ONE LEVEL, NO PRIOR INJURIES
  - ROM: MULTIPLE LEVELS OF IMPAIRMENT, RE-INJURY TO SAME AREA
    - SPECIFIC DISORDERS, ROM , MOTOR AND SENSORY
- EXTREMITIES – ROM, SENSORY AND MOTOR
- USED COMBINED VALUE CHART – PAGE 604 - 606

PERMANENT IMPAIRMENT RATING





IMPAIRMENT RATING

2nd Biggest Value Driver in COLOSSUS

- Patient must be at Maximum Medical Improvement (MMI) – medically stable
- 2% awarded if there is no impairment rating issued

Two (2) Methods:

- Diagnostic Related Estimate (DRE) Method
- Range of Motion (ROM) Method – Multiple injuries in same region of the spine
- If both can be used: Award higher impairment

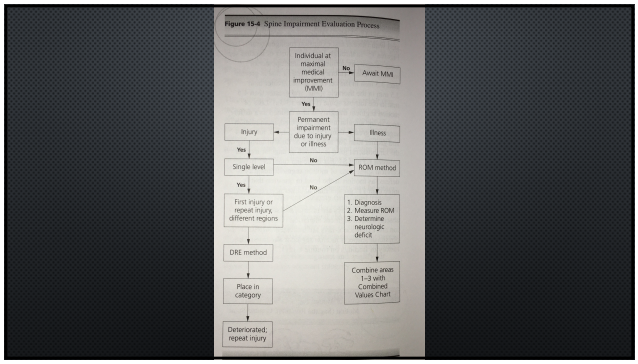


Figure 15-4 Spine Impairment Evaluation Process

Hi Aaron,
I recently heard you say something about CSC telling carriers to allow Impairment Ratings from DC's. Can that be cited anywhere? Also, is the 5th Edition the one to use for PI?

It was in an unprotected document I got from a licensing insurer.
Use 5th Ed
The 6th has extensive problems and is probably inadmissible at trial. So colossus still uses the 5th. For more on the problems search for the Iowa workers comp investigation into the 6th Ed. There are papers online by the review panel members that you should read .

Hi Aaron,
An attorney recently told me that Colossus is "antiquated" and not use very much anymore.
Just wondering how much it is being used today.

DA
I understand many insurers continue to use Colossus and similar programs in third party cases. We are aware that Allstate and its subsidiaries, as well as other insurers continue to use it in first party (UM/UIM cases).
There are many insurers who have flat out lied to me about using Colossus even when they knew I had written a text on it, and when there were public documents confirming their company was using it. There were some insurers who explicitly instructed their adjustors to lie about using it if asked by a policyholder or their attorney. A lot of lawyers are fooled into believing the adjustors.
Is it antiquated? Yes, but it is still used. There are so many problems with the program that it was never viable to use. That doesn't mean that it wasn't used. The insurers used it because it allowed them to artificially decrease claim payments. That is very clear from the non-protected depositions from CSC executives (owner of the Colossus program.)

So, when working up a PI case, is it best to assume Colossus or some other program is being used?

I would unless it is State Farm on the other side. And, even at that, most of the concepts (the areas of interest) remain the same. So, it is best to learn the systems and then take notes accordingly.

Aaron

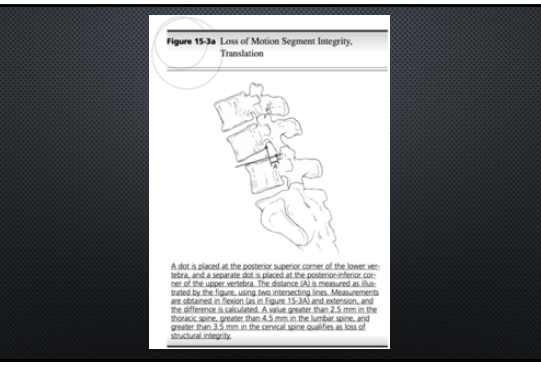

Figure 15-3a Loss of Motion Segment Integrity, Translation

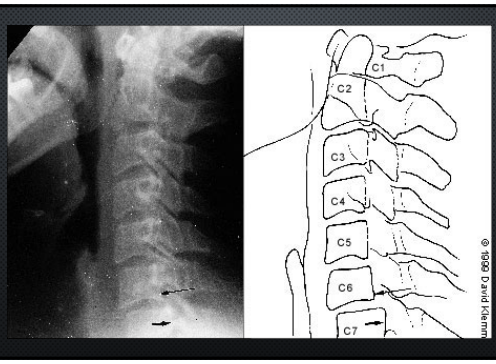
A dot is placed at the posterior superior corner of the lower vertebra, and a separate dot is placed at the posterior-inferior corner of the upper vertebra. The distance (A) is measured as illustrated by the figure, using two intersecting lines. Measurements are obtained in flexion (as in Figure 15-3A) and extension, and the difference is calculated. A value greater than 2.5 mm in the thoracic spine, greater than 4.5 mm in the lumbar spine, and greater than 3.5 mm in the cervical spine qualifies as loss of structural integrity.

QUICK REVIEW OF LIGAMENT LAXITY RELATED INFO FROM CHIRO TEXTS

- ESSENTIALS OF SKELETAL RADIOLOGY, 2ND ED.; YOKUM AND ROWE (1996)
  - GEORGE'S LINE: P. 149 "…MAY BE RADIOLOGIC SIGN OF INSTABILITY DUE TO FRACTURE, DISLOCATION, LIGAMENTOUS LAXITY, OR DJD"



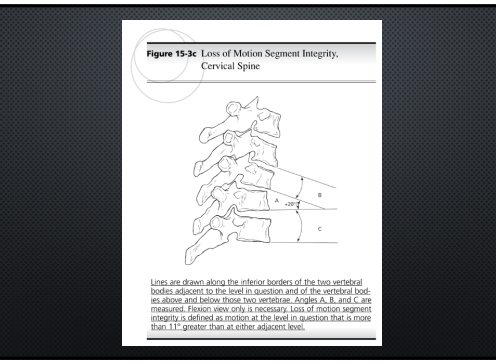


Figure 15-3c Loss of Motion Segment Integrity, Cervical Spine

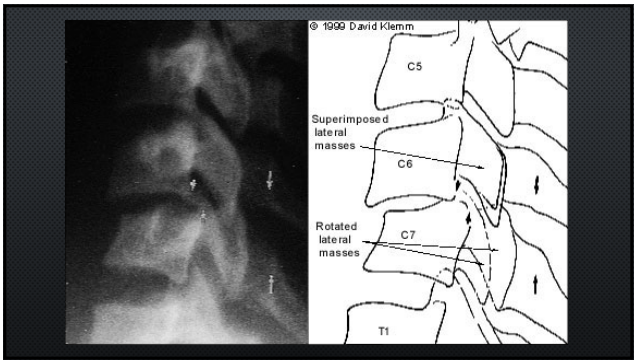
Lines are drawn along the inferior borders of the two vertebral bodies adjacent to the level in question and of the vertebral bodies above and below those two vertebrae. Angles A, B, and C are measured. Flexion view only is necessary. Loss of motion segment integrity is defined as motion at the level in question that is more than 11° greater than at either adjacent level.



DRE category IV impairment #			
	Cervical	**Thoracic**	**Lumbar**
Translation *	3.5mm	>2.5mm	4.5mm

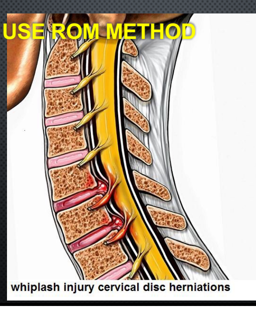
Table 15-3 Criteria for Rating Impairment Due to Lumbar Spine Injury

DRE Lumbar Category I 0% Impairment of the Whole Person	DRE Lumbar Category II 5%- 8% Impairment of the Whole Person	DRE Lumbar Category III 10%-13% Impairment of the Whole Person	DRE Lumbar Category IV 20%-23% Impairment of the Whole Person	DRE Lumbar Category V 25%-28% Impairment of the Whole Person
No significant clinical findings, no observed muscle guarding or spasm, no documentable neurologic impairment, no documented alteration in structural integrity, and no other indication of impairment related to injury or illness; no fractures	Clinical history and examination findings are compatible with a specific injury; findings may include significant muscle guarding or spasm observed at the time of the examination, asymmetric loss of range of motion, or nonverifiable radicular complaints, defined as complaints of radicular pain without objective findings; no alteration of the structural integrity and no significant radiculopathy *or* individual had a clinically significant radiculopathy and has an imaging study that demonstrates a herniated disk at the level and on the side that would be expected based on the previous radiculopathy, but no longer has the radiculopathy following conservative treatment *or* fractures: (1) less than 25% compression of one vertebral body; (2) posterior element fracture without dislocation (not developmental spondylolysis) that has healed without alteration of motion segment integrity; (3) a spinous or transverse process fracture with displacement without a vertebral body fracture, which does not disrupt the spinal canal	Significant signs of radiculopathy, such as dermatomal pain and/or in a dermatomal distribution, sensory loss, loss of relevant reflex(es), loss of muscle strength or measured unilateral atrophy above or below the knee compared to measurements on the contralateral side at the same location; impairment may be verified by electrodiagnostic findings *or* history of a herniated disk at the level and on the side that would be expected from objective clinical findings, associated with radiculopathy, or individuals who had surgery for radiculopathy but are now asymptomatic *or* fractures: (1) 25% to 50% compression of one vertebral body; (2) posterior element fracture with displacement disrupting the spinal canal; in both cases, the fracture has healed without alteration of structural integrity	Loss of motion segment integrity defined from flexion and extension radiographs as at least 4.5 mm of translation of one vertebra on another or angular motion greater than 15° at L1-2, L2-3, and L3-4, greater than 20° at L4-5, and greater than 25° at L5-S1 (Figure 15-3); may have complete or near complete loss of motion of a motion segment due to developmental fusion, or successful or unsuccessful attempt at surgical arthrodesis *or* fractures: (1) greater than 50% compression of one vertebral body without residual neurologic compromise	Meets the criteria of DRE lumbosacral categories III and IV; that is, both radiculopathy and alteration of motion segment integrity are present; significant lower extremity impairment is present as indicated by atrophy or loss of reflex(es), pain, and/or sensory changes within an anatomic distribution (dermatomal), or electromyographic findings as stated in lumbosacral category III and alteration of spine motion segment integrity as defined in lumbosacral category IV *or* fractures: (1) greater than 50% compression of one vertebral body with unilateral neurologic compromise

WHEN TO USE ROM METHOD



able 15-7 Criteria for Rating Whole Person Impairment Percent Due to Specific Spine Disorders to Be Used as Part of the ROM Method*

Disorder	% Impairment of the Whole Person Cervical	Thoracic	Lumbar
I. Fractures			
A. Compression of one vertebral body.			
0%-25%	4	2	5
26%-50%	6	3	7
> 50%	10	5	12
B. Fracture of posterior element (pedicle, lamina, articular process, transverse process).	4	2	5
Note: An impairment due to compression of a vertebra and one due to fracture of a posterior element are combined using the Combined Values Chart (p. 604). Fractures or compressions of several vertebrae are combined using the Combined Values Chart.			
C. Reduced dislocation of one vertebra.	5	3	6
If two or more vertebrae are dislocated and reduced, combine the estimates using the Combined Values Chart.			
An unreduced dislocation causes impairment until it is reduced; the physician should then evaluate the impairment on the basis of the individual's condition with the dislocation reduced.			
If no reduction is possible, the physician should evaluate the impairment on the basis of the range-of-motion and neurologic findings according to criteria in this chapter and Chapter 13, The Central and Peripheral Nervous System.			
II. Intervertebral disk or other soft-tissue lesion			
Diagnosis must be based on clinical symptoms and signs and imaging information.			
A. Unoperated on, with no residual signs or symptoms.	0	0	0
B. Unoperated on, with medically documented injury, pain, and rigidity* associated with none to minimal degenerative changes on structural tests.†	4	2	5
C. Unoperated on, stable, with medically documented injury, pain, and rigidity* associated with moderate to severe degenerative changes on structural tests;† includes herniated nucleus pulposus with or without radiculopathy.	6	3	7
D. Surgically treated disk lesion without residual signs or symptoms; includes disk injection.	7	4	8
E. Surgically treated disk lesion with residual, medically documented pain and rigidity.	9	5	10
F. Multiple levels, with or without operations and with or without residual signs or symptoms.	Add 1% per level		
G. Multiple operations *with* or without residual signs or symptoms			
1. Second operation	Add 2%		
2. Third or subsequent operation	Add 1% per operation		
III. Spondylolysis and spondylolisthesis, not operated on			
A. Spondylolysis or grade I (1%-25% slippage) or grade II (26%-50% slippage) spondylolisthesis, accompanied by medically documented injury that is stable, and medically documented pain and rigidity with or without muscle spasm.	6	3	7
B. Grade III (51%-75% slippage) or grade IV (76%-100% slippage) spondylolisthesis, accompanied by medically documented injury that is stable, and medically documented pain and rigidity with or without muscle spasm.	8	4	9
IV. Spinal stenosis, segmental instability, spondylolisthesis, fracture, or dislocation, operated on			
A. Single-level decompression without spinal fusion and without residual signs or symptoms	7	4	8
B. Single-level decompression without spinal fusion with residual signs or symptoms	9	5	10
C. Single-level spinal fusion with or without decompression without residual signs or symptoms	8	4	9
D. Single-level spinal fusion with or without decompression with residual signs and symptoms	10	5	12
E. Multiple levels, operated on, with residual, medically documented pain and rigidity.	Add 1% per level		
1. Second operation	Add 2%		
2. Third or subsequent operation	Add 1% per operation

Table 15-15 Determining Impairment Due to Sensory Loss

a. Classification

Grade	Description of Sensory Deficit	% Sensory Deficit
5	No loss of sensibility; abnormal sensations, if present, do not interfere with normal activities	0
4	Decreased superficial tactile sensibility (decreased light touch, with or without abnormal sensations or pain, that is not gross; some pain)	1–20
3	Decreased superficial tactile sensibility (diminished light touch and function discriminators), with some abnormal sensations or pain, that interferes with some activities	26–60
2	Decreased superficial cutaneous pain and tactile sensibility (decreased protective sensibility), with abnormal sensations or pain (severe), that may prevent some activities	61–80
1	Deep cutaneous pain sensibility present, but superficial pain and tactile sensibility (absent protective sensibility), with abnormal sensations or severe pain, that prevents most activities	81–99
0	Absent sensibility; abnormal sensations or severe pain that prevents all activity	100

b. Procedure

1. Identify the area of involvement using the dermatome charts (Figures 15-1 and 15-2).
2. Identify the nerve root(s) to evaluate the area(s) (Table 15-12 and Figure 15-48).
3. Grade the severity of the sensory deficit or pain according to the classification above.
4. Find the maximum impairment of the extremity(ies) due to nerve root deficit for each spinal nerve (Table 15-16) and brachial plexus (Table 16-14).
5. Multiply the severity of the sensory deficit by the maximum impairment value to obtain the extremity impairment for each spinal nerve involved.

Table 15-16 Determining Impairment Due to Loss of Power and Motor Deficits

a. Classification

Grade	Description of Muscle Function	% Motor Deficit
5	Active movement against gravity with full resistance	0
4	Active movement against gravity with some resistance	1–25
3	Active movement against gravity only, without resistance	26–50
2	Active movement with gravity eliminated	51–75
1	Slight contraction and no movement	76–99
0	No contraction	100

b. Procedure

1. Identify the motion involved, such as flexion, extension, etc.
2. Identify the muscle(s) performing the motion and the spinal nerve(s) involved.
3. Grade the severity of motor deficit of individual muscles according to the classification above.
4. Find the maximum impairment of the extremity due to motor deficit for each spinal nerve involved (Tables 15-18, 15-17, 16-13, and 17-37).
5. Multiply the severity of the motor deficit by the maximum impairment to obtain the extremity impairment for each spinal nerve involved.

* Adapted from Medical Research Council.*

Table 15-17 Unilateral Spinal Nerve Root Impairment Affecting the Upper Extremity*

Nerve Root Impaired	Maximum % Loss of Function Due to Pain, Deficit or Paln	Maximum % Loss of Function Due to Strength
C5	5	30
C6	8	35
C7	5	35
C8	5	45
T1	5	40

Table 15-18 Unilateral Spinal Nerve Root Impairment Affecting the Lower Extremity*

Nerve Root Impaired	Maximum % Loss of Function Due to Pain, Deficit or Pain	Maximum % Loss of Function Due to Strength
L2	5	30
L4	5	65
L5	5	97
S1	5	97

BILLING FOR IMPAIRMENT RATINGS

99455 – Impairment Rating

Performed by Treating Doctor

History, Exam and Record Review

DRE Model: $500 First body part and $250 each additional body area

ROM Model: $750 First body part and $250 each additional part

BILLING FOR IMPAIRMENT RATINGS

99456 – Impairment Rating

Performed by Other Than Treating Doctor

History, Exam and Record Review

DRE Model: $750 First body part and $250 each additional body area

ROM Model: $1,000 First body part and $250 each additional part

BILLING FOR FINAL NARRATIVE

99080 – Special Report

$500 – First 4 pages

$150 - Each additional page

Review Entire Case

- Initial history: List all injuries
- Diagnosis: Initial and final
- Treatment: What and why
- Test Results: List positive results
- Prognosis and Future Medical
- Impairment Rating: 5th Edition of AMA Guides
- Causation: Reasonable degree of probability
